

## Puppy Dog Kindergarten News Notes

The kindergarten class has just finished a unit of study on the body. We began with a look at how the heart, lungs, and blood all work together. We also looked at all the organs responsible for digestion. We all loved making body shirts showing all the organs. We also talked about the role of the skeleton and learned the names of many bones in the body.

We are concluding this unit with a study of nutrition. We have looked at each of the five food groups and talked about what each group gives the body. We also talked about how much of each group you should eat each day by following the “Choose My Plate” program for health eating.

We were all excited to end this unit with a tasting party!

For our next unit we will return to the map of the United States. This time we will focus on the southern region.
